

MEMORANDUM:

RE: McDonnell Aircraft Company clean-up of PCB spill, St. Louis, Mo.

From: Steven Kinser *Steven Kinser 10-31-85*

To : Gale Wright

The attached correspondence is somewhat dated January 1985. The company reports that they have cleaned up a historic spill that was recently discovered. The site has been cleaned up to less than 1 ppm the original spill apparently was only 39.4 ppm average which is less than the CDC health advisory level of 50 ppm. The clean up consisted of only 176.5 cubic feet of soil. The site is fenced and secured by a guard. I see no reason to pursue this site any farther at this point.
